## Tekerlekler

Genelde endüstriyel ortamlarda, evsel kullanım araçlarında, atmosferik dış ortamlarda kullanılan tekerlekler, çoklukla düşük hızlarda ve / veya durağan koşullarda kullanılmaktadır.

İhtiyaca cevap verebilmesi açısından genel olarak iki tip tekerlek sınıflandırması yapılmaktadır.

### 1- Oynak (kendi düşey eksenini etrafında dönen) tekerlekler;

Oynak tekerlekler, bir döner maşa ve ona akslanmış bir teker, aksel dönme kabiliyeti veren bir yataklama ve taşıyacağı gereç ile bağlanacak bir tabla, pim veya civatadan oluşmaktadır. Hem radyal, hem aksel dönme hareketi yapar.

### 2- Sabit (düşey ekseninde dönme özelliği bulunmayan) tekerlekler;

Sabit bir maşa üzerine akslanmış bir tekerden ibaret olup, sadece radyal dönme hareketi yapar.

### Tekerlek seçiminde yardımcı olabilecek görüşler:

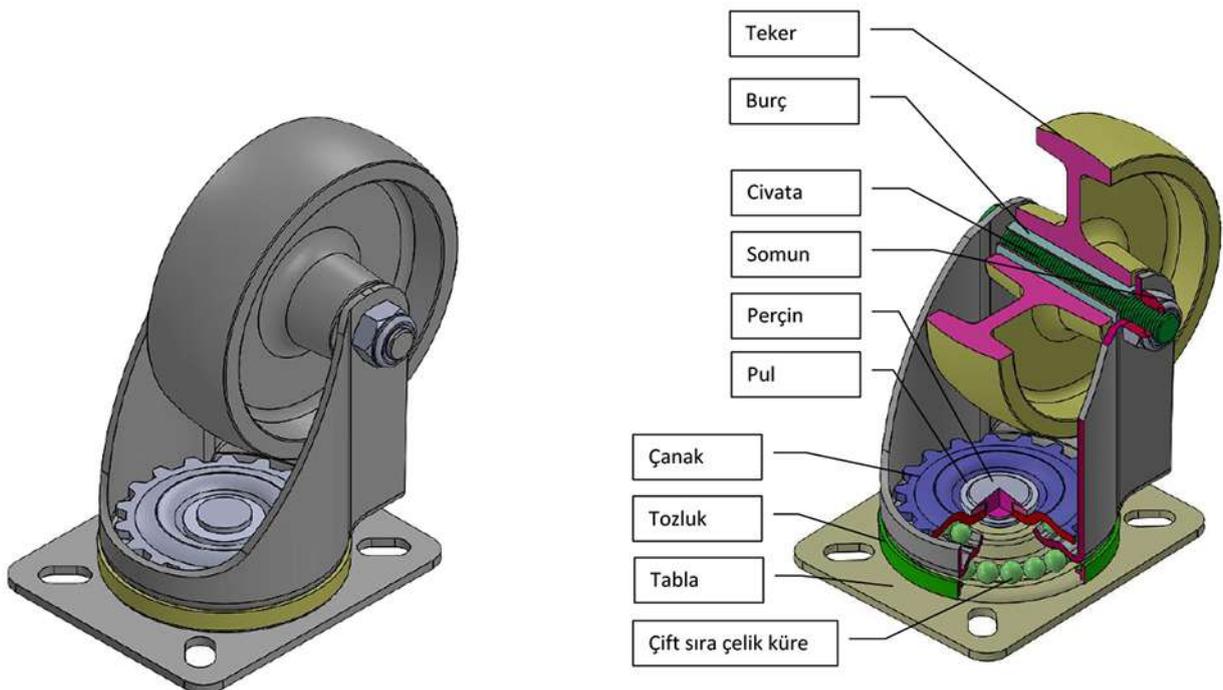

Tekerleklerin kullanıldığı araçlarda doğru seçim en önemli ayrıntıdır.

### Tekerlek seçiminde önemli özellikler:

1. Taşıma yükü
2. Zemin özellikleri (toprak, beton, seramik vs.)
3. El ile veya motor ile hareket ettirileceği
4. Ortamın şartları (tozlu, nemli, yüksek sıcaklık şartları içeren ortamlar)
5. Kullanılacağı sektörle ilgili özel vasıflar(kimya, ilaç, mobilya, market, sanayi vs.)

# Castors

Wheels used in industrial environments, domestic handling equipment, and atmospheric outdoor conditions are generally operated at low speeds and/or under stationary conditions.

In order to meet different application requirements, wheels are generally classified into two main types.

## 1- Swivel Castors (rotating around their vertical axis):

Swivel castors consist of a swivel fork, a wheel mounted on an axle, a bearing system that allows axial rotation, and a top plate, pin, or bolt used to connect the castor to the equipment. They provide both radial rotation of the wheel and axial rotation around the vertical axis.

## 2- Fixed Castors (without vertical axis rotation):

Fixed castors consist of a wheel mounted on a rigid fork. They allow only radial rotation of the wheel and do not rotate around the vertical axis.

## Guidelines to Assist in Wheel Selection

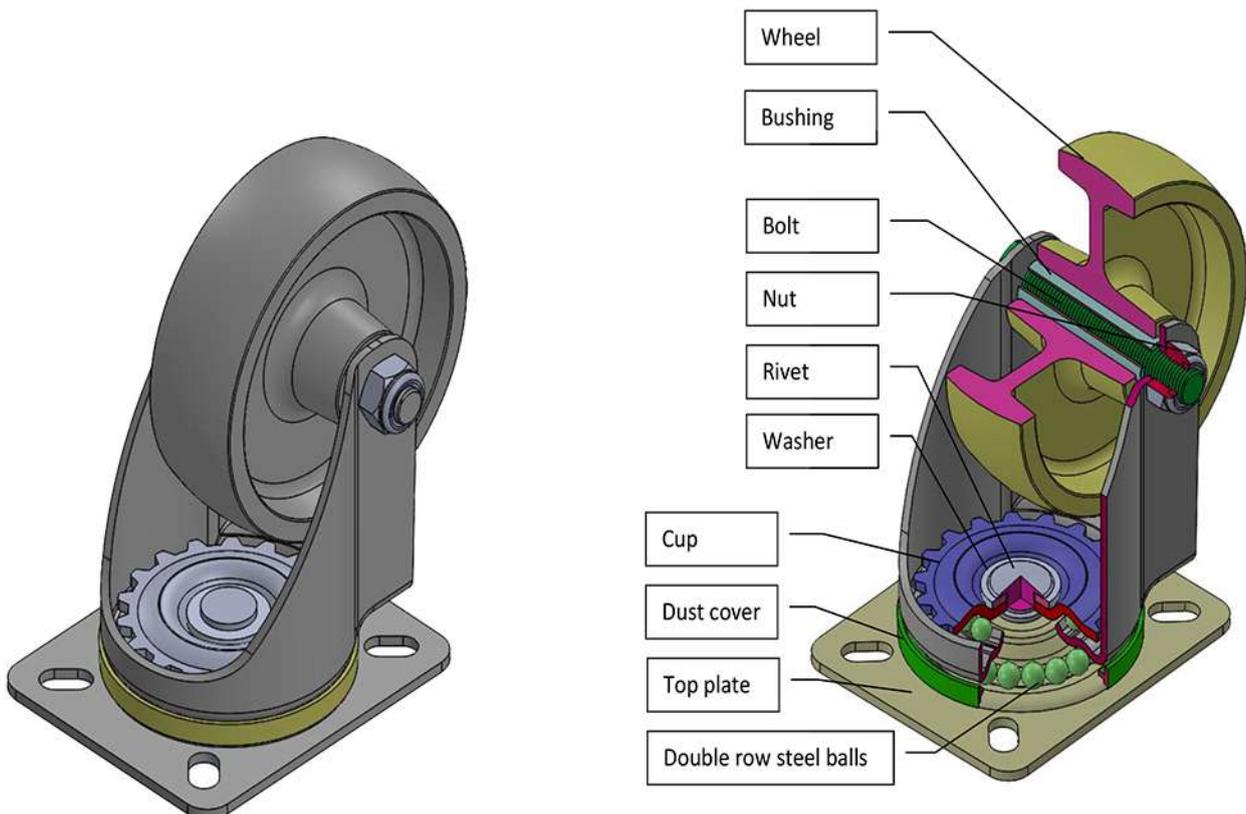

Correct wheel selection is one of the most critical factors for equipment on which wheels are used.

### Key factors to consider when selecting wheels:

1. Load capacity
2. Floor conditions (soil, concrete, ceramic, etc.)
3. Whether the equipment is moved manually or by motorized systems
4. Environmental conditions (dusty, humid, or high-temperature environments)
5. Special requirements related to the application sector (chemical, pharmaceutical, furniture, retail, industrial, etc.)

## Wheel coding system

We will examine the coding system in three groups.

**First Group**  
Specifies the type and characteristics of the fork construction.

**Second Group**  
Specifies the type and characteristics of the wheel.

**Third Group**  
Specifies the wheel diameter in millimeters.

**First Group:** This group specifies the product series, as well as the fork, top plate, and mounting type.

**The first digit from left to right indicates the product series.**

1. Furniture Series Wheels
2. Retail / Market Wheels
3. Standard and Stainless Steel Wheels for Medium Loads
4. Heavy Duty Wheels
5. Hospital / Medical Series Wheels
6. Light Duty Wheels

**The second digit from left to right indicates the type of fork used in the product. This digit changes if different forks are used for the same product (e.g., due to variations in material, shape, etc.).**

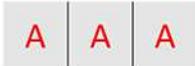

The third digit from left to right indicates the top plate type (e.g., parallel or diagonal holes).

The fourth digit from left to right indicates the product's mounting type.

0. Swivel castor with hole mounting
1. Swivel castor with bolt mounting
2. Swivel castor with top plate mounting
3. Swivel castor with pin mounting
4. Fixed castor with top plate mounting
5. Swivel castor with socket mounting

**Second group:** This group specifies the characteristics of the wheel mounted on the fork, such as rubber, cast iron, bearing-equipped, or bushing type (without bearing), etc.

**Third Group:** This group indicates the diameter of the wheel attached to the steel structure, expressed in millimeters.

In the product code, this is indicated by a one (1) as the fourth character from the left.

**Example:** (•••1••••••)

## Plate-mounted wheels

---

Mounted on a flat surface using a bolt and nut.

The plate-mounted system can be used for all load capacities, provided the wheel and metal structure are suitable by design.

In the product code, this is indicated by a two (2) as the fourth character from the left.

**Example:** (•••2••••••)

## Pin-mounted wheels

---

Assembly is completed by inserting the fixed pin into the appropriately sized socket.

Generally suitable for light and medium load applications.

In the product code, this is indicated by a two (3) as the fourth character from the left.

**Example:** (•••3••••••••)

## Fixed plate-mounted wheels

---

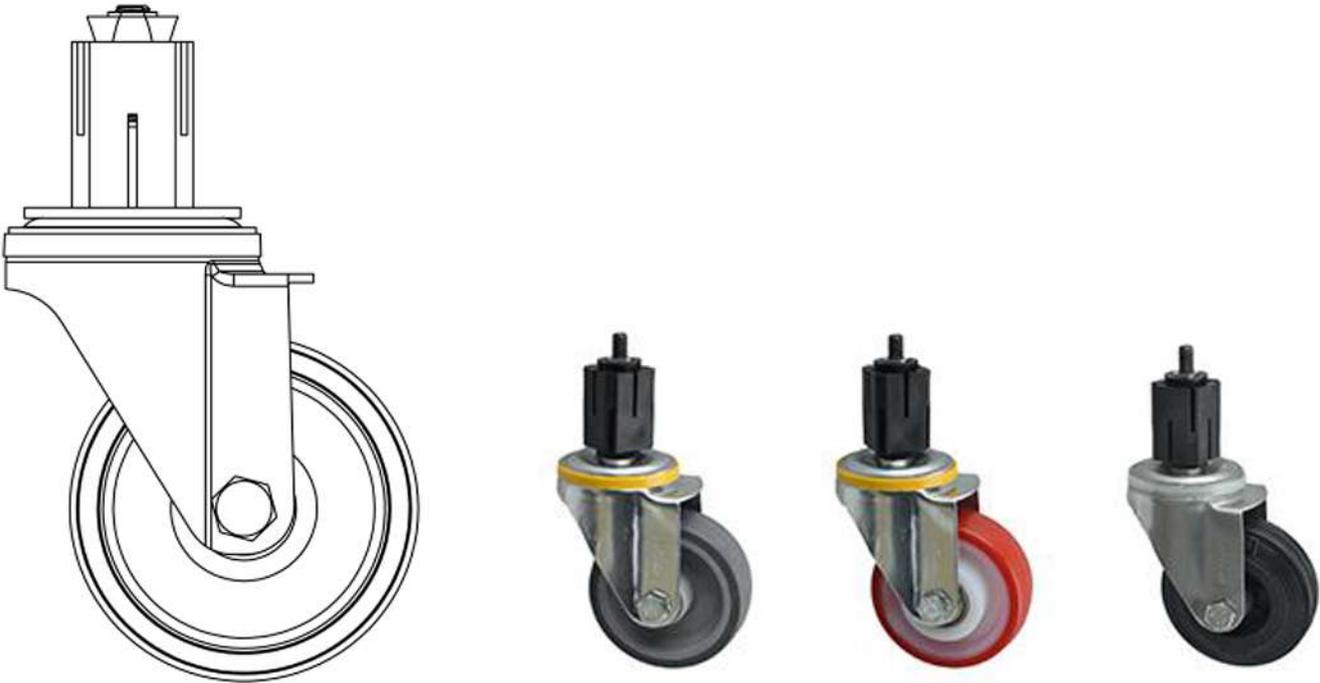

Mounted on a flat surface using a bolt and nut.

By design, it can be used for all load capacities, provided the wheel and metal structure are suitable.

In the product code, this is indicated by a four (4) as the fourth character from the left.

**Example:** (•••4••••••••)

# Socket-mounted wheels

For applications using square or tubular profiles, a wheel with a plastic socket of appropriate diameter and size is placed into its housing and secured with a bolt. It is generally suitable for light and medium-duty applications. In the product code, this is indicated by a five (5) as the fourth character from the left.
